

### W3D- IC BOX WITHOUT TANK

System power  
on & auto delay  
8s

Making pure water

CLOSE WATER

Set flush time then  
flush for 35s  
before standby

#### 1.Operation "delay" function :

- a.To prevent unstable water pressure to cause of intermittence operation
- b. Filter Container drawdown for user friendly on water leakage design while exchanging filter

#### 2.Flush setting:Flush duration it depends water quality & usage

#### 3.The flush function not executable while making pure water , need to switch off output pipe.

#### 4.Flush setting :

Scale/3mins , **1=3min** ; **A ~ F = 10min ~ 15min** ; **0=Function Disable**

#### 5.Flush button:

Filter exchange,Filter container exhaust , avoid void block ; overloading function disable (RESET)。
